GRAFTED TOMATO

Grafting is a natural process joining the top part of one plant (scion) to the root system of another plant (rootstock) without any genetic modification. As tissues heal, the two plants fuse, combining the scion's exceptional fruit quality and flavor with the rootstock's vigor, disease resistance, and increased water and nutrient uptake—which leads to higher yields.

Benefits of GRAFTED Tomatoes:

- Stronger, more vigorous plants
- Incredible harvests and longer season
- Improved ability to withstand temperature extremes
- Superior defenses against soil-borne diseases, pests

'Big Beef'
